I would like to express my support for the One Laptop per Child project to take place at Mupewa Primary School. I strongly feel that, this project is really needed at our school as, the school parents already indicated the willing of having ICT at our school through the donation of a computer room which is currently without any computers. Therefore this project will satisfy the wishes of these parents. Since the project sounds so comprehensive the internet part of the package will enhance learners to explore extensively on their subject learning content which will indeed be a positive impact of this project. Both I and the teachers we are all very enthusiastic about this project as we know it will improve the school's learning and teaching activities. We are planning to draft a teacher's schedule of attachment so that each teacher has enough time to be exposed and learn from you. And this can be done in the afternoon after school as teachers have already indicated their willingness on after school activities. Usually it is never easy adjusting to changes. We might not experience smoothness on adapting to new teaching methodology using new technology, but the good among my team members will make us win the battle. We will of course try to our level best. I foresee 70% of teachers to be willing to lead a program after school.

Thank you for your consideration in advance.
