Subject: A Letter of Support for OLPCorps: BRAC University, Cameroon

Dear Sir / Madam,

It's with much concern that TechCeFaCos NGO CM, TechCeFaCos US and their development partners-IAF Canada and Kids Education Concern Cameroon will be jointly and warmly welcoming this proposal by Mustafa Zaman and MD.Sabbir Ahmed, both of BRAC University for the project: OLPCorps Africa to be executed in the Kumbo community of Cameroon, Africa for a period of 10 weeks.

In this light, TechCeFaCos being a non profit and non governmental organization that focuses on promoting creativity and technological empowerment for a positive change, will be open, embarrassing and committing her efforts in providing maximum support for this project, aimed at expanding learning in Africa for children of ages 6-12 years. This would be another great involvement with children based on our previous experiences with a similar project. The e-Kids Project run under her educational development initiative 'EDUCTAINMENT'-the art of joyful education, in promoting primary or basic education as stipulated by the first Millennium Development Goal.

So, we'll be a facilitator to this project in enhancing the following:

- The arrival and stay of its coordinators in Cameroon.
- Storability and provision of training and showcasing centre of the laptop uses as a great learning and teaching tool,
- Ensuring proper deployment of the laptops to our two selected schools- Government Teachers Training Collage practicing school-Government Primary School Mbve Kumbo and DIDAVIVI Nursery and Primary school Tobin, Kumbo;
- Organizing for and ensuring continuity of the project in Cameroon under a joint initiative of the ministry of basic education in Cameroon; IAF Canada and TechCeFaCos NGO CM and US based on the 'EDUCTAINMENT'-the art of joyful education, initiative and e-Kids Project. Furthermore, with regards to its expected coordinators: Mustafa Zaman and MD.Sabbir Ahmed, they have rich experiences in IT background (i.e. knowledge) as well as children's educational projects. Based on interactive learning techniques with their home based NGO-Jagoree as volunteers; we are sure of a proper startup and continuity of the project in Cameroon.

In all both TechCeFaCos Cameroon and US as well as their development partners and the ministry of basic education; the association of parents and teachers of the schools concerned are in support of the project and its continuity through a MOU (memorandum of understanding) as a common agreement to ensure transparency in the project management based on the terms of OLPC and the project.

Best regards,

Emmanuel F. SEVIDZEM
Managing Director

'Creativity & Technological Empowerment For A Positive Change!'
